

## INDUCTION HARDENED CHROME PLATED BARS

Chemistry	Size Range (In.)	Yield Strength (PSI)	
1045/1050 hot rolled properties	1/2" to 10"	50,000 PSI Approx Min.	<u>Surface Finish:</u> RMS - 12 maximum (.305 mm)
1045/1050 micro-alloy	1/2" to 5-1/2"	75,000 PSI Min. Yield	<u>Salt Spray Test:</u> 48 hours minimum in accordance with ASTM B-117.
*1045/1050 high strength properties	5/8" to 4-1/2"	100,000 PSI Min. Yield	<u>Selective Hardening:</u> 12" (304.80 mm) minimum hardened length, 3/4" (19.05 mm) minimum unhardened length, ± 1/4" (6.35 mm) tolerance for induction hardened transition zone.
*1045 standard in sizes to 2-1/2"; 1050 standard in sizes over 2-1/2".			<u>Length:</u> Any specified length as required up to 24'.
<u>Surface Hardness</u> Rc 50 minimum (other specifications on inquiry).			<u>Packaging:</u> Collared and boxed or individually fiber-tubed.
<u>Case Depth:</u> .050" minimum (1.27 mm) effective case depth unless otherwise specified. (On full length bars, maximum of 1-1/2" [38.10 mm] from either end is neither hardened nor plated.)			<u>Identification:</u> Ends can be color-coded to customer requirements or industry standards.
<u>Effective Case Depth:</u> Effective case depth is the perpendicular distance from the surface of a hardened case to the furthest point where a specified level of hardness is maintained. The hardness criterion is Rc 50, except where otherwise specified. Effective case depth should always be determined on the part itself, or on samples or specimens having a heat treated condition representative of the part under consideration. (SAE recommended practice - METHODS OF MEASURING CASE DEPTH - SAE J 423 a.)			<u>Tolerances:</u> Tolerances, in decimals of an inch, provide for undersize variation only:
<u>Plate Thickness:</u> .0005" minimum (0.127 mm) hard chrome-plated unless otherwise specified.			To 2-1/4" (57 mm) inclusive .0015" (0.0381 mm) 2-1/2"-3" (63.50mm) to 3" (76.20 mm) inclusive .002" (0.05 mm) Over 3" (76.20 mm) to 4" (101.60 mm) inclusive .003" (0.0762 mm) Over 4" (101.60 mm) .005" (0.127 mm)
<u>Hardness of Chrome Plate:</u> Rc 68-72			

## **ASTM A-311**

### **Classification**

The bars are furnished in the following classes and grades.

Class A – Normal-draft cold-drawn and stress-relieved rounds, squares, hexagons, and flats in the following grades:<sup>5</sup>

Grades	UNS Designations <sup>5</sup>
1018	G10180
1035	G10350
1045	G10450
1050	G10500
1541	G15410
1117	G11170
1137	G11370
1141	G11410
1144	G11440

Class B – Heavy-draft cold-drawn and stress-relieved rounds and hexagons in the following grades:

Grade	UNS Designations <sup>5</sup>
1045	G10450
1050	G10500
1541	G15410
1141	G11410
1144	G11440

<sup>5</sup> New designation established in accordance with Practice E 527 and SAE J 1086.

<sup>A</sup> When lead is required as an added element to a standard steel, a range from 0.15 to 0.35 % inclusive, is specified. Such a steel is identified by inserting the letter "L" between the second and third numerals of the grade designation, for example, 10L45. A cast or heat analysis is not determinable when lead is added to the ladle stream.
